PROFILE

Software Developer with hands-on experience in Python, Machine Learning, Deep Learning, Computer Vision, LLM-based applications, and conversational AI. Experienced in developing data-driven solutions, real-time computer vision systems, and voice assistant applications. Familiar with SQL, REST APIs, Git/GitHub, and foundational concepts in RAG, Agentic AI, LLM APIs, LangGraph, vector databases, MCP, and CI/CD.

PROFESSIONAL EXPERIENCE

Junior Software Developer, *Medha Robotics Private Limited* 11/2025 – 09/2026 | Hyderabad

- Developed an AI-based voice assistant using TinyLLaMA with multilingual support, integrating TTS, STT, and Sarvam AI for real-time interaction.
- Represented the team at India AI Impact Summit 2026 Delhi, showcasing the voice assistant product.
- Explored robotics simulation using NVIDIA Isaac Sim and tested workflows with the Groot N1.5 model.
- Studied hardware requirements for training and deployment using NVIDIA Isaac Sim.

Junior Software Developer, *People Tech Group* 05/2025 – 10/2025 | Hyderabad

- Developed and deployed machine learning and deep learning models using Python and TensorFlow.
- Worked on real-time computer vision projects utilizing OpenCV and YOLO for image and video analysis.
- Performed data collection, data annotation, data preprocessing, and model evaluation using NumPy and Pandas.
- Collaborated with team to develop and optimize YOLO-based real-time object detection models.

SKILLS

Programming & Data — Python, SQL, NumPy, Pandas, Data Preprocessing, Data Analysis

Web Technologies — HTML, CSS, JavaScript (Basic)

Machine Learning & Deep Learning — ML, DL, PyTorch, TensorFlow, CNNs, Model Training & Evaluation, Basic Statistics

Computer Vision — OpenCV, YOLO, Object Detection, Image Classification, Real Time Inference

Generative AI & LLM — LLMs, LLM API Integration (Basic), RAG (Basic), Vector Databases (Basic), Agentic AI (Basic), STT, TTS

Backend & Engineering — REST APIs, JSON, Git, GitHub, Version Control, CI/CD (Basic)

Cloud — AWS (Basic)

PROJECTS

AI-Based Voice Assistant

- Developed a Python-based AI voice assistant integrating LLM, Speech-to-Text (STT), Text-to-Speech (TTS), and Sarvam AI for conversational interaction.
- Built an end-to-end voice processing pipeline for capturing user input, processing commands, and generating spoken responses.
- Implemented wake-word detection and command handling to support continuous user interaction.
- Integrated and tested AI models and APIs for real-time conversational workflows.
- Represented the team at the India AI Impact Summit 2026, Delhi, showcasing the voice assistant product.

Smart Road Safety Monitoring System

- Developed a real-time road safety monitoring system for helmet detection and driver distraction analysis.
- Trained and optimized YOLO-based models for object detection and driver-safety monitoring.
- Performed data collection, annotation, preprocessing, cleaning, visualization, and exploratory analysis using Python, Pandas, and NumPy.
- Integrated YOLO inference with OpenCV and ESP32-CAM for real-time video streaming and detection.
- Evaluated model performance and optimized the inference pipeline for real-time applications.

EDUCATION

Bachelor of Technology, 11/2020 – 04/2024 | Vishakapatnam, AP
Avanthi Institute Of Engineering And Technology, Makavarapalem
CGPA: 8.22
